Activity #7

Cyber Threat Attack and Mitigation Simulation

Objective

At the end of this activity, learners should be able to:

- Identify different types of cyber attacks
- Analyze real-time security scenarios
- Apply correct mitigation strategies
- Understand how logs and alerts work in a SOC environment

Activity Link

Access the simulation here:

👉 https://adovm-ctm-sim.netlify.app/

Instructions

Part 1: Access the Simulator

1. Open the link provided above
2. Enter the following:
    - Learner Name
    - Cyber Handle (your alias in cybersecurity)
3. Click Start

Part 2: Perform the Simulation

1. You will be given 10 cyber attack scenarios
2. Each scenario includes:
    - Attack description
    - Severity level (Critical / Medium)
    - Multiple mitigation options

1. For each scenario:
    - Read carefully
    - Analyze the attack
    - Choose the best mitigation action
    - Review the attack explanation after answering

Note: Each question has a time limit

Part 3: Analyze Results

After completing all scenarios, review your:

- Score
- Rating (Beginner / Intermediate / Advanced / Expert)
- Logs Panel (your actions and results)

Part 4: Reflection Questions

Answer the following:

1. What type of attack did you find most difficult? Why?
2. Which mitigation strategy did you use most often?
3. How did the logs panel help you understand the attack?
4. Why is quick decision-making important in cybersecurity?
5. What will you improve next time?

Output / Submission

Submit the following:

- Screenshot of your Final Report (Score & Rating)
- Screenshot of Logs Panel
- Answers to the Reflection Questions
